

Model driven development (MDD) for banking system

Application of MDD

- It creates a software models first and generate codes automatically
- Banking requirements are converted into UML
- Models are transformed into code using tools.
- Reduce manual coding errors and improves the development speed

Models created

Platform independent Model (PIM)

- Customer
- Account
- Transaction
- Loan Management

Platform specific Model (PSM)

- Java/spring application
- SQL database tables
- web interface

UML diagram

Advantage

- Reduces coding errors
- Faster development
- Easy maintenance
- Improves consistency

Limitations of

- High initial
- complex m
- Requires sp
- Difficult f

Agile object platform

Agile with

- Requirement
- object an
- Developm
- Continuous

Sprint Iter

Sprint-1:

- use regist

Sprint-2:

- Course

Sprint-3:

- online

Sprint-4:

- Quiz

Objects

- classes:

- student

- Teacher

- course

- Assign

- Forum

Limitations of MDD

- High initial cost
- complex models
- Requires special tools
- Difficult for large projects

* Activity - 5 *

Agile object oriented Development for E-learning platform

Agile with OOP

- Requirements are divided into user stories
- object and classes are identified
- Development is done in small sprints
- Continuous feedback improves features

Sprint Iterations

Sprint-1:

- use registration and login

Sprint-2:

- Course creation and enrollment

Sprint-3:

- online classes and discussion forums

Sprint-4:

- quizzes, assignments, progress tracking

Objects and classes

Classes:

Relationship

• student

• student → course

• Teacher

• Teacher → course

• course

• course → Quiz

• Assignment

• course → Assignment

• Forum

Continuous feedback benefits

- Find error early
- Improve user satisfaction
- Add new features easily
- Increases software quality

Sprint plan

Week	Work	Deliverable
1	login & user	user module
2	Courses	course module
3	online learning	class & form module
4	test & tracking	quiz & progress module

class:
